🚀 BatchIt – Full Screen List

🔐 1. Authentication & Onboarding

• Splash Screen
• Onboarding Screens (2–3 slides max)
• Login Screen
• Register Screen
• Google/Facebook Sign-in (integrated UI)
• Forgot Password Screen

👤 2. User Profile & Settings

• Profile Screen
• Edit Profile Screen
• Order History Screen
• Settings Screen

- Language (EN/FR)
- Theme (Dark/Light)
- Notification Preferences

🏠 3. Home (Main Entry Point)

• Home Screen

- Nearby batches list
- Quick stats (active batches)
- CTA: Create / Join batch

🛒 4. Batch System

• Create Batch Screen

- Product name
- Bulk size

- Location

• Batch Details Screen (VERY IMPORTANT 🔥)

- Product info
- Progress bar (e.g. 23kg / 50kg)
- Users in batch
- Join button
- Hub info

• Join Batch Screen

- Enter quantity
- Confirm participation

📦 5. Orders

• My Orders Screen

- Active orders
- Completed orders

• Order Details Screen

- Product
- Quantity
- Status (Pending / Ready / Picked)
- Hub info

🏢 6. Hub System

• Hub Dashboard Screen

- Managed batches
- Live progress tracking

• Manage Product Screen

- Set bulk size

- Reset product

🗺️ 7. Map Feature

• Map Screen

- Nearby users
- Batch locations
- Hub markers

• Map Detail Popup (bottom sheet style)

- Batch summary
- Quick join button

💬 8. Community Chat

• Chat List Screen (optional early)
• Chat Room Screen

- Messages
- Input field
- Sender info

🔔 9. Notifications

• Notifications Screen

- Batch completed
- Pickup reminders
- System alerts

🎯 10. Utility / System Screens

• Loading Screen / States
• Empty State Screens (no batches, no orders)
• Error Screen (network issues, etc.)

🔥 MVP SCREEN PRIORITY (IMPORTANT)

Start with ONLY these:

✅ Core MVP Screens

1. Login / Register
2. Home
3. Create Batch
4. Batch Details
5. Join Batch
6. My Orders
7. Profile

👉 That’s enough to launch.

⚡ Phase 2 Screens (After MVP)

• Map Screen
• Chat Screen
• Hub Dashboard
• Notifications Screen
• Settings (theme + language)

🧠 Design Tip (Very Important)

Don’t design screens in isolation.

Think in **flows**:

👉 User Flow Example:
Login → Home → Batch → Join → Order → Pickup

If that flow is smooth, your app works.
